

ENGT-102 | PROJECT 1 | REQUIREMENTS ANALYSIS

Captain Flint's Lost Treasure

Requirements Analysis Document Template | 20 points

Purpose. Use the Project Brief and Detailed Technical Specification to show that you understand the problem before starting to write the program.

Type directly in each light-gray response area. Responses may expand as needed.

1. Document information (2 points)

Complete all four fields. Use the information from your GitHub account for the username and link.

Student name	
Date	
GitHub username	
GitHub repository link	

2. Problem definition (4 points)

In your own words, describe the engineering problem this project is intended to solve. Explain why an autonomous underwater rover is appropriate for the mission.

3. Stakeholders and users (2 points)

Identify two stakeholders of the rover-control system. Explain what each stakeholder needs from the completed program.

4. System scope (4 points)

Describe what the rover-control program must do.

5. Constraints and assumptions *(2 points)*

Identify two project constraints and two reasonable assumptions that will affect your design or implementation.

6. Success criteria *(4 points)*

Explain how you will determine whether the completed program is successful. Write this in your own words and refer to specification ID's where needed.

7. Risks and planning (2 points)

Identify two development challenges you expect to encounter. For each challenge, describe one practical action you can take to reduce the risk or recover from the problem.

Before submitting: confirm that all seven questions are complete, your responses are written in your own words.
